

South Saskatchewan River Watershed Stewards

My Watershed

I think that my watershed is very important. My watershed is important because it supplies my community with the water it needs to wash clothes, to drink, to shower and other important things like that. Watersheds are also important because they release the rain water if there becomes too much and it lets in water if there becomes too less. Our watershed is also important because every living thing needs water to survive and our watershed supplies us with the water we need.

My watershed is the Lake Diefenbaker Gardiner Dam. I live about 15 minutes south of the dam. My dad, Richard, works at the dam. My dad has taken me down to the dam. The dam is how I get my water to shower, to drink, and to wash my clothes.

I can protect my water by not littering or spilling any oil or gas in the lake. I find watersheds very interesting! I think it is so, so amazing!
